HCG Pregnancy Test Kit

BPPI Product Specification

Cassette Dimension (L x W x H)	60 mm \pm 5 mm x 10 mm \pm 2 mm x 5 mm \pm 1mm
Color of Cassette	Glossy white
Type of Plastic	Virgin, HIPS plastic quality
Shape of Cassette	Rectangle with drop well and specified indicator area.

The HCG assay shall be a rapid one-step test, based on an immune chromatographic technology. A membrane with an absorbent pad overlapping a strip of fiber glass paper that is impregnated with a lyophilized colloidal conjugate of gold particles and monoclonal solid phase antibodies to HCG. Other absorbent pads at the end of the assay absorb excess sample fluid. The urine sample is introduced into the device and proceeds through the absorbent pad, then laterally onto a chromatographic membrane. As it contacts the membrane, the sample dissolves the lyophilized conjugate. In a reactive sample, the HCG antigen will attach to the antibodies in the colloidal solution. As the conjugate moves forward on the membrane, anti-HCG monoclonal antibody affixed on the test zone (T") will bind the HCG-gold conjugate complex, forming a pink line ("T"). All samples will cause a pink colored line to appear in the control zone (C").

This line is formed by the binding of the polyclonal antibodies (Anti-mouse IgG) affixed onto the control zone to the sample-colloidal gold conjugate. Presence of this line indicates that the test has been carried out correctly. All Fastest One Step HCG Urine Pregnancy Tests will display positive results with specimens containing HCG at the level close to or greater than 10mIU/ml or close to or greater than 25mIU/ml depending on which test you have purchased.
